

Compact, eco-friendly and free-focus floodlight with an RGB laser and drawing functions

Super efficient laser lighting

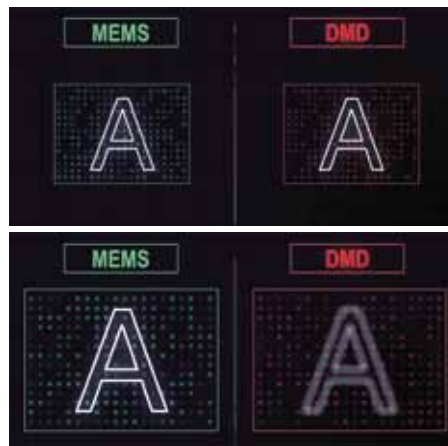

The MEMS mirror device controls the RGB laser beam to adjust the focus of this drawing floodlight for short to long distances. It is an intelligent lighting fixture with a new function that enables automatic drawing in accordance with the shape of object detected by the camera.

Energy preserving

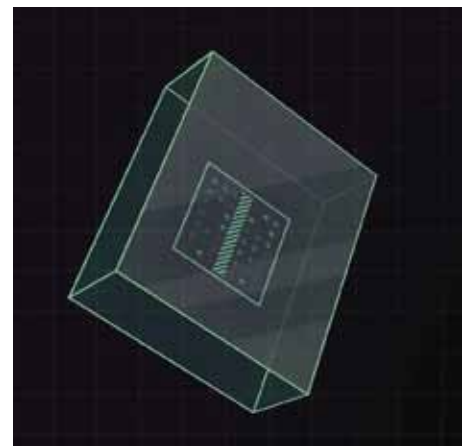

The almost whole quantity of light from the light source is utilized for MEMS reflection/projection; this floodlight uses laser very efficiently.

Free focus

The parallel laser light helps maintain the clear focus even when the distance changes.

Compact body

The compact body allows installation at any place (106*320*61mm).
