

**STANLEY ELECTRIC CO., LTD.**

Using its proprietary optical technology cultivated from the development of automotive headlamps, Stanley entered the ultraviolet lamp market in 2010. We have so far made progress with deep ultraviolet (UV-C) by fully utilizing our strength of having both lamp and LED-based devices and units. We hope to contribute to providing a safer and more secure society using light for the people of the world in the "with Corona" and "after Corona" era as it is sometimes called in the coming years.

## Event Topics

# LEDSFOCUS

To deliver vibrant color everywhere. This is the answer to which our quest for a prosperous future has led. To reach that goal, we have continued to meet the challenge of light. The LEDSFOCUS PRO series is our first step toward such a future. With our line-up of many distribution angles and our unique luminescent colors, we are able to cater to customer demands that would previously have been impossible.

# Lighting Expert

Established in 1920, Stanley started out as a manufacturer and vendor of light bulbs used in automobiles.

Even today, we boast a healthy market share as a manufacturer of lighting equipment for the automotive industry.

In 1971, we took the lead to become the world's first company to commercially market LEDs with high luminosity.

Our LEDs have since received high praise for their reliability and are being used in a wide range of areas.

LEDs have evolved with Stanley, creating along the way a world of enriched lighting that is Eco friendly.
